

Tamim[Work](#)[Research](#)[Startup](#)[About](#)[Let's talk](#)

Md Tamim Hossen

[Software engineer](#) · [Researcher](#) · [Entrepreneur](#)

I build software, explore the possibilities of quantum computing, and turn ideas into products.

[View my work](#)[Research](#)[Let's connect](#)

Software engineering student, University of Dhaka.

Exploring quantum computing, building software, founding a startup.

What I do

Four things, one thread: building.

Software engineering

Designing and building software with modern tools, clean architecture and practical problem solving.

Quantum exploration

Studying quantum algorithms and the problems where quantum approaches could beat classical ones.

Product building

Taking ideas from architecture and development through to deployment.

Entrepreneurship

Validating problems and building products with a long-term mindset.

Featured work

A few projects, chosen for depth over count.

Emotion Analyzer

C++ · Machine learning · NLP

A text emotion classifier with Naive Bayes, Logistic Regression and SVM, all implemented from scratch.

Add: the problem, your approach, and your accuracy results.

[GitHub](#) [Demo](#)

Mini Git

Systems · Data structures

A version-control tool built to understand how Git stores and tracks changes.

Add: language, commands supported, and what you learned.

[GitHub](#)

Your third strongest project

Stack · goes · here

A web app, SRS-based project or quantum experiment. Describe the problem, approach and result in two lines.

[GitHub](#) [Demo](#)

Research interests

I'm exploring quantum computing and emerging computational paradigms, curious how quantum algorithms can address problems that are hard for classical systems. I'm learning in public, so this is a list of interests, not credentials.

Quantum computing

Quantum algorithms

Quantum machine learning

Quantum optimization

Quantum cryptography

AI / ML

Pustu Tusti

Co-founder. A health-focused meal planning platform that helps people make better food and nutrition decisions through personalized plans and professional guidance.

My role	Product development, software architecture, technology, business strategy and team collaboration.
Status	[Prototype / MVP / launched / validating: update this]
Case study	Coming soon: the problem, the idea, the product, architecture, challenges and what I learned.

About

I'm a software engineering student at the University of Dhaka who wants to build technology that solves real problems.

My interests span software, emerging technologies and entrepreneurship. Alongside building products, I'm exploring quantum computing and research opportunities in it, and working with a team as a co-founder.

I'm most interested in where engineering, research and entrepreneurship meet.

Currently exploring

Quantum computing

Algorithms and optimization

Artificial intelligence

Generative AI and machine learning

Entrepreneurship

Product development and startup building

Research

Problems where computing meets emerging technology

Technologies

Languages C++, Java, Python, JavaScript / TypeScript, SQL

Software React, Next.js, Node.js, REST APIs, Git, Linux

Research and
AI

Machine learning, NLP, quantum computing, algorithms

Databases

PostgreSQL, MongoDB, Oracle

Let's connect

Open to collaborations, research conversations and co-founding ideas.
